S 밁 δÃ 밁 Š 밁 Ş В Qy compound to affect one or more activities of the ballity of the test
compound to affect one or more activities of the calcium receptor; and
c(C) comparing the ability with the ability of the test compound to
affect the one or more CR activities in a cell not comprising the
recombinant nucleic acid. The present sequence encodes human
parathyroid CR, designated a phupCaR 4.0. The nucleic acid in the
chipCaR 4.0 can be used as part of the recombinant nucleic acid in the
method described above. The compounds identified can be used to treat
chipcarathyroidism, osteoporosis and other bone and mineral-related
disorders. They can also be used for the treatment of diseases and
clisorders associated with disrupted Ca2+ responses, e.g. seizures,
stroke, spinal cord injury, hypoxia-induced nerve cell damage such as in
cardiac arrest or neonatal distress, epilepsy, neurodegenerative
cliseases such as Alzheimer's disease, Huntington's disease and
cliseases dementia, muscle tension, depression, and anxiety.

PS Example 25; Fig 47; 174pp; English.

CC The bovine parathyroid calcium receptor gene encodes a 1085 amino acid protein. The tissue from which this receptor and receptors from human CC parathyroid and rat kidney are derived, respond to changes, and control CC changes, in calcium ion concentration, e.g. parathyroid hormone regulates CC charges, in calcium ion concentration, e.g. parathyroid hormone regulates CC clark homeostasis in blood and extracellular fluid, and kidney function CC alters through changes in Ca2+ levels in juxtaglomerular and proximal CC tubule cells in the kidney. The purified receptors (produced CC recombinantly) can be used to screen for compounds that modulate calcium CC receptors activity, especially those that can be used to treat diseases CC associated with the receptors in these tissues. They can also be used CC to raise antibodies for use in detection assays.

PT Screening for calcium receptor-active compounds - by recombinant PT expression of nucleic acid encoding calcium receptor and determining PT the effect of compounds on calcium receptor activity
PS Claim 1; Fig 47; 176pp; English
CC A method has been developed of screening for a compound able to affect
CC one or more activities of a calcium receptor (CR) comprises: (A)
CC contacting a recombinant cell with a test compound, where the
CC recombinant cell comprises a recombinant nucleic acid expressing the CR,
CC provided that the cell does not have functional CR expression from
CC endogenous nucleic acid; (B) determining the ability of the test
CC compound to affect one or more activities of the calcium receptor; and
CC affect the one or more CR activities in a cell not comprising the
CC comparing the ability with the ability of the test compound to
CC affect the one or more CR activities in a cell not comprising the
CC parathyroid CR, designated a BoPCaR 1. The nucleic acid sequence of
CC becard a care as a part of the recombinant nucleic acid in the
CC diseases or disorders characterised by abnormal calcium homeostasis, e.g.
CC hyperparathyroidism, osteoporosis and other bone and mineral-related
CC disorders associated with disrupted Ca2+ responses, e.g. setzures,
CC cardiac arrest or neonatal distress, epilepsy, neurodegenerative
CC diseases such as Alzheimer's disease, Huntington's disease and
CC carkinson's disease, dementia, muscle tension, depression, and anxiety.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    transcription initiation and/or splicing. Three additional sites of sequence variation occur within the coding regions of cDNA clones pHupCaR5.2 and pHupCaR4.0 demonstrating that they encode distinct proteins. Sequence analysis of the human CaR gene indicates that the additional 30 bp in clone pHupCaR5.2 as compared to pHupCaR4.0, results from alternative mRNA splicing. This alternative splicing is predicted to insert 10 additional amino acids into the CaR protein encoded by pHupCaR5.2 between residues 536 and 537 of the protein encoded by pHupCaR4.0. In addition pHupCaR4.0 encodes Gln at position 925 and Gly at positions. The human CaR gene encodes for Gln and Arg respectively at these residence are encodes for Gln and Arg respectively at the second of the protein encodes the second of the protein encoded by an action of the protein encoded by an action of the protein encoded by a phupCaR4.0. In addition pHupCaR5.2 encodes Gln at position 925 and Gly are positions. The human CaR gene encodes for Gln and Arg respectively at the positions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    These sequences were isolated from human parathyroid gland adenoma tumour using pBoPCaR1 as a hybridisation probe. mRNA was isolated from a 39 year old caucasian male diagnosed with primary hyperparathyroidism and two clones of approx. 5 and 4 kb were identified. These cDNA's were injected into xenopus occytes which were assayed for the presence of functional calcium receptors. Both clone types gave rise to functional calcium receptors. Both clone types gave rise to functional calcium receptors as assessed by the stimulation of calcium-activated chloride currents upon addition of appropriate calcium receptor agonists, e.g. NPS R-67 and NPS R-568. Sequence analysis of the two cDNA clones indicated the existence of at least two sequence variants differing in the 3' untranslated region and which may result from alternative polyadenylation. Sequence variation also exists in the 5' end of the inserts. These sequence differences may have arisen due to alternative translated regions and which may result from alternative constraints in the sequence constraints and the sequence of the constraints of the constraints and the sequence and the constraints of the constraints and the sequence constraints and the sequence of the constraints and the sequence of the constraints and the sequence constraints and the sequence of the constraints and the sequence constraints and 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       1524 caggtgcctgtgtcagtgtgtaccacggactgtctggcagggcac---cacagggtggtt 1580
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          these positions. These two
pharmacologically distinct.

antibody production

Example 27; Fig 48; 174pp; English.

The Human parathyroid calcium receptor gene encodes a 1088 amino acid protein. The tissue from which this receptor and receptors from bovine parathyroid and rat kidney are derived, respond to changes, and control changes, in calcium ion concentration, e.g. parathyroid hormone regulates ca2+ homeostasis in blood and extracellular fluid, and kidney function alters through changes in Ca2+ levels in juxtaglomerular and proximal tubule cells in the kidney. The purified receptors (produced recombinantly) can be used to screen for compounds that modulate calcium receptor activity, especially those that can be used to treat diseases associated with the receptors in these tissues. They can also be used to raise antibodies for use in detection assays.

PT Screening for calcium receptor-active compounds - by recombinant PT Screening for calcium receptor and determining PT the effect of compounds on calcium receptor activity

PS Claim 1; Fig 48; 176pp; English.

CC A method has been developed of screening for a compound able to affect CC one or more activities of a calcium receptor (CR) compounds on calcium receptor (CR) compound able to affect CC recombinant cell comprises a recombinant nucleic acid expressing the CR, CC provided that the cell does not have functional CR expression from CC endogenous nucleic acid; (B) determining the ability of the test compound to affect one or more activities of the calcium receptor; and CC compound to affect one or more cativities of the calcium receptor; and CC affect the one or more CR activities in a cell not comprising the ability with the ability of the test compound to affect the present sequence encodes human CC parathyroid CR, designated a pHuPCaR 5.2. The nucleic acid in the present sequence encodes human CC purpose or disorders characterised by abnormal calcium homeostasis, e.g. the preparathyroidism, osteoporosis and other bone and mineral-related CC disorders. They can also be used for the treatment of diseases and CC ation as plant of the responses, e.g. selzures, cc ation as alzabelmer's disease, Huntington's disease and CC diseases such as Alzabelmer's disease, Huntington's disease and anxiety.

The tissue from which this receptor and receptors from bovine parathyroid and rat kidney are derived, respond to changes, and control changes, in calcium ion concentration, e.g. parathyroid hormone regulates Ca2+ homeostasis in blood and extracellular fluid, and kidney function alters through changes in Ca2+ levels in juxtaglomerular and proximal tubule cells in the kidney. The purified receptors (produced recombinantly) can be used to screen for compounds that modulate calcium receptor activity, especially those that can be used to treat diseases associated with the receptors in these tissues. They can also be used to raise antibodies for use in detection assays. Sequence 4131 BP; 988 A; 1170 C; 1052 G; 921 T;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            В
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       80
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           В
PT screening for calcium receptor-active compounds - by recombinant procession of nucleic acid encoding calcium receptor and determining the effect of compounds on calcium receptor activity the effect of compounds on calcium receptor activity the effect of compounds on calcium receptor activity of the effect of compound able to affect one or more activities of a calcium receptor (CR) comprises: (A) contacting a recombinant cell with a test compound, where the contacting a recombinant cell with a test compound, where the contacting a recombinant nucleic acid; (B) determining the ability of the test provided that the cell does not have functional CR expression from the compound to affect one or more activities of the calcium receptor; and compound to affect one or more activities of the test compound to affect one or more activities of the calcium receptor; and compound to affect one or more activities of the comprising the creombinant nucleic acid. The present sequence encodes rat recombinant nucleic acid. The present sequence encodes rat parathyroid CR, designated a pRakCaR 3A. The nucleic acid in the method described above. The compounds identified can be used to treat diseases or disorders characterised by abnormal calcium homeostasis, e.g. hyperparathyroidism, osteoporosis and other bone and mineral-related cold diseases and other bone and mineral-related cold diseases and calcium homeostasis and cold diseases and cold diseas
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               US5858684-A.

It was isolated from a shark kidney cDNA library using a rat kidney calcium receptor cDNA as probe. Also claimed are: a probe comprising the 4131 bp SKCaR-RP sequence; an isolated PVCR present in the plasma membranes of sequence; an isolated PVCR present in the plasma membranes of cells of elasmobranch fish, particularly from cells found in the cells of elasmobranch fish, particularly from cells found in the collecting duct or late distal tubule in the kidney, intestine, gill, rectal gland, gonad or brain; an antibody that specifically binds to a PVCR; and a method of screening for aquatic PVCR aguatic PVCR activates or inhibits aquatic PVCR mediated ion aquatic PVCR activates or inhibits aquatic PVCR mediated ion
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New isolated Aquatic polyvalent of develop products for increasing of of fish for use in aquaculture of fish for use in Specialish.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Dogfish shark kidney calcium receptor related protein cDNA Calcium receptor related protein; CaR-RP; dogfish shark; SI polycation-sensing receptor; aquaculture; fish farming; salimity tolerance; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      transport and endocrine changes that permit fish to adapt to free or salt water. The method facilitates the aquaculture of marine fish and can provide for the development of marine fish that are easily adaptable to fresh water aquaculture.
